

All about Rabies

- Rabies is caused by a **virus**.
- You can get rabies virus if an animal bites you, usually a dog
- Rabies can also be passed from animal to animal
- The rabies virus makes your body stop working

YOU can Stop Rabies!

These animals can get rabies:

Cattle

Horses

**They are all
mammals**

Dogs

Cats

Mongoose

Only mammals can get rabies.
Mammals are warm blooded animals,
with fur or hair and produce live young

These animals cannot get rabies:

Birds

Fish

Snake

Crocodile

They are not
mammals.

**They cannot
give you
rabies**

Reptiles

How do animals and people get rabies?

Saliva

- through bites,
licking, scratching

Blood
Faeces
Urine

**You cannot get rabies just by touching
an animal with rabies**

If an animal with rabies bites you, the rabies virus can get into your body.

The virus attacks the central nervous system.

It makes your body
stop working

If you think an animal has rabies, do not touch it or try to feed it

Tell an adult who can call an animal control officer to take care of the animal safely.

Never disturb a dog that is:

Caring for puppies

Sleeping

Eating

Keep away from wildlife.

Don't encourage a wild animal to come up to you by feeding it.

It might seem tame and allow you to get close, but remember that this is not the way wild animals usually act. Something could be wrong.

Stay away

from animals that you do not know

Remember...

Stray animals may not be
vaccinated against rabies

If a dog comes close to you:

Stand still
Keep quiet

Keep your arms
down and your
hands folded

Count in your
head to the highest
number you know, over and
over again, until the dog
goes away.

Imagine you
are a **tree**

Look at
your feet

If a dog attacks you:

**Keep still
and quiet**

Curl up into a
ball, with your
head tucked in

Put your
hands over
the back of
your neck

Imagine you
are a **rock**

If you get bitten:

Immediately wash the wound really well with soap and lots of water

Tell an adult

See a doctor

You will be given medicine to make sure that you don't get rabies

The doctor will:

Clean the wound properly

Give you anti-rabies vaccinations

The vaccinations will help to stop
the virus from attacking your body

**It is important that you do
everything the doctor says**

If your pet is bitten:

Take your pet to a vet who will decide what is best for the animal

Stop Rabies!

- 1. Get your pet vaccinated**
- 2. Sterilise your pet**
- 3. Do not let your pet go wherever it likes**
- 4. Keep a lid on rubbish**
- 5. Get help to remove stray animals**

You can Stop Rabies!

Let's make rabies history!
