

Human healthcare professionals: Advance your knowledge of human rabies prevention and patient care with the RHC

The Rabies Healthcare Certificate (RHC) is a free online course designed specifically for human healthcare professionals to increase proficiency in all elements of managing potential human rabies cases, using the updated WHO guidelines.

The knowledge and skills resulting from the RHC will help you to keep your patients safe from rabies and play a greater role in your country's program to eliminate rabies.

The course material covers the latest guidelines from the World Health Organization (WHO), including the newest PrEP and PEP schedules, and also includes advice, quizzes and case studies to address situations that arise in different field conditions.

Module I: How do you prevent rabies in humans?

Module II: Rabies pre-exposure prophylaxis (PrEP) for humans

Module III: What to do when a potentially exposed individual presents at a healthcare facility

Module IV: Special considerations for rabies post-exposure prophylaxis (PEP) in humans

Module V: Clinical presentation and management of rabies in humans

Module VI: Laboratory confirmation of a human rabies case

Module VII: Case Scenarios

The only prerequisite for the course is the completion of the Rabies Educator Certificate (REC), which provides basic information about rabies prevention and community engagement.

The RHC can be completed online or downloaded for offline study, with a final online assessment. Successful candidates receive a Certificate of Achievement.
