

Importance of Data

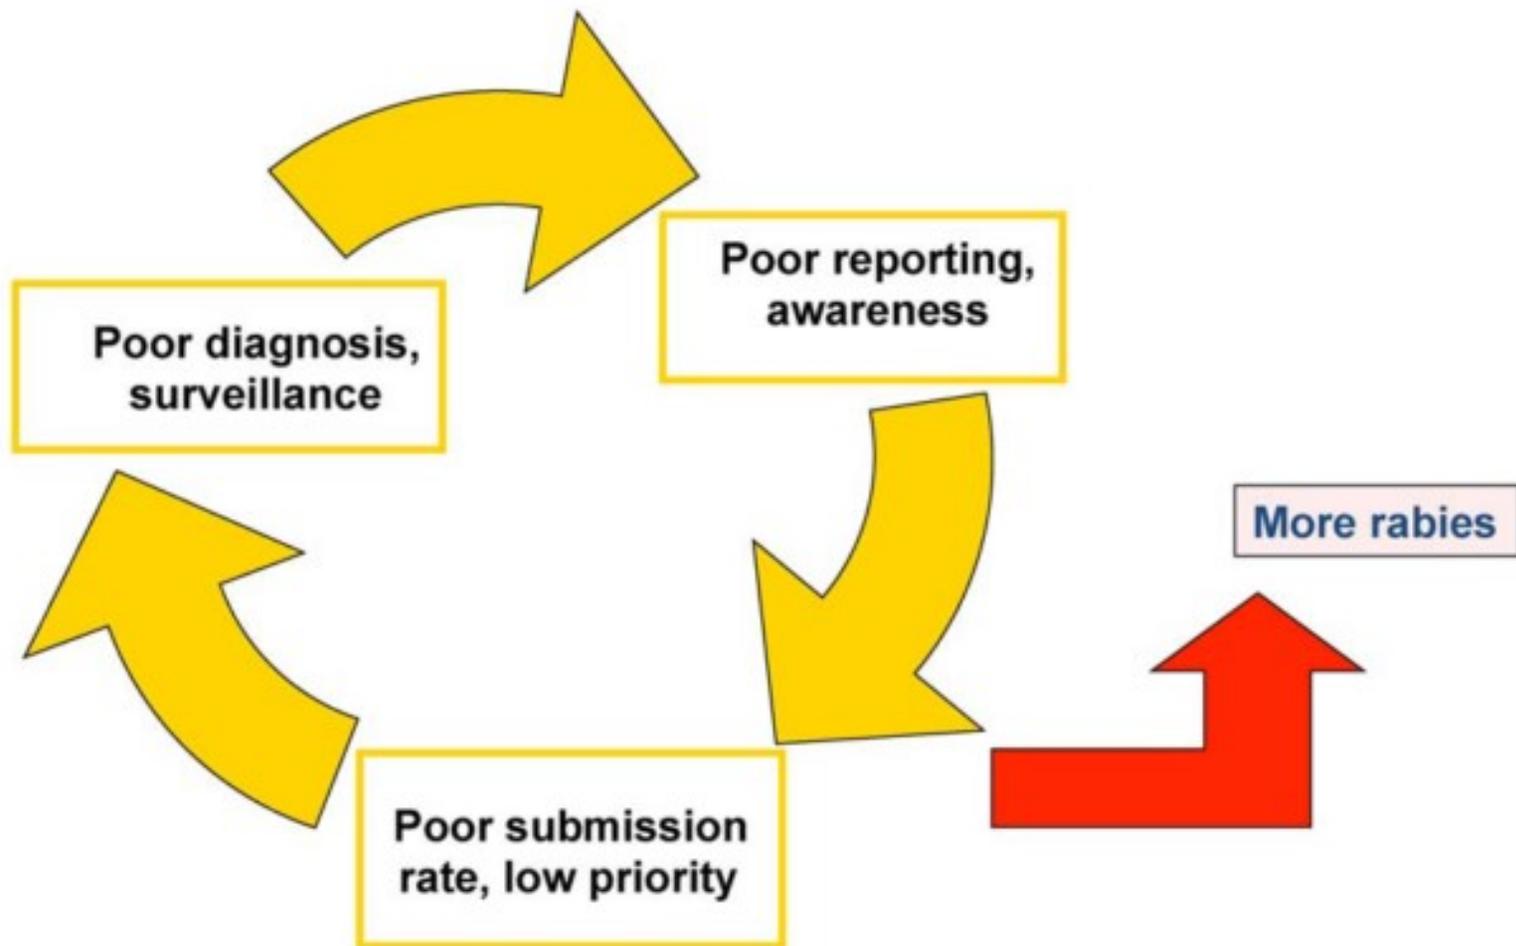

Global Alliance for Rabies Control

GARC-WAP workshop

Franschhoek, South Africa

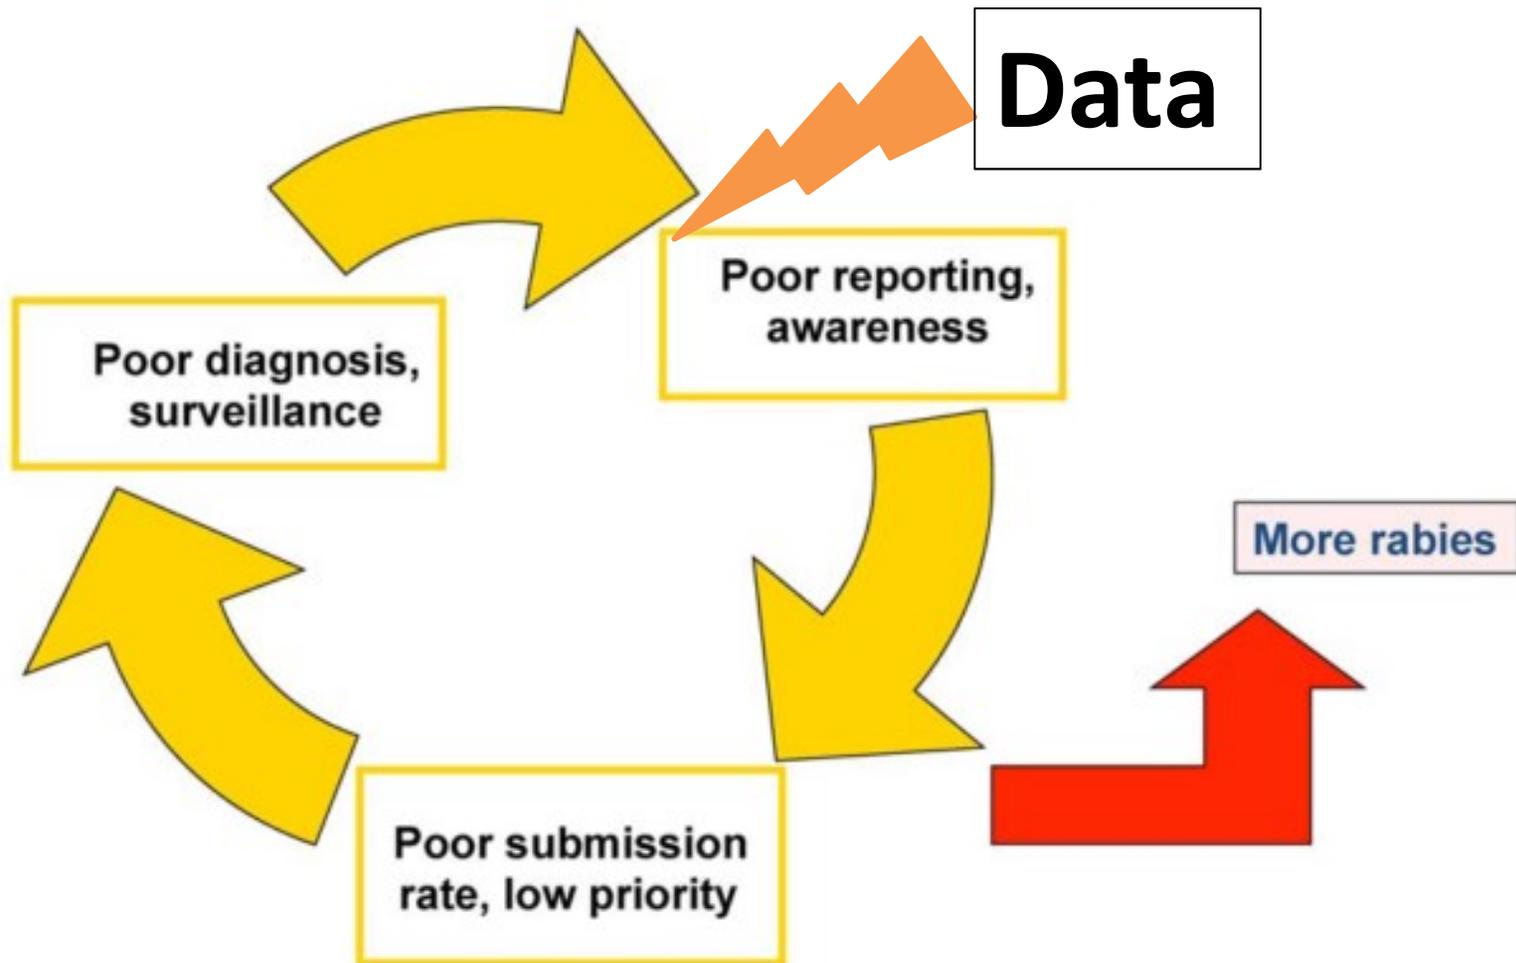

Disease Prioritization

**Rabies circle of neglect:
Fuelled by poor laboratory diagnosis and surveillance**

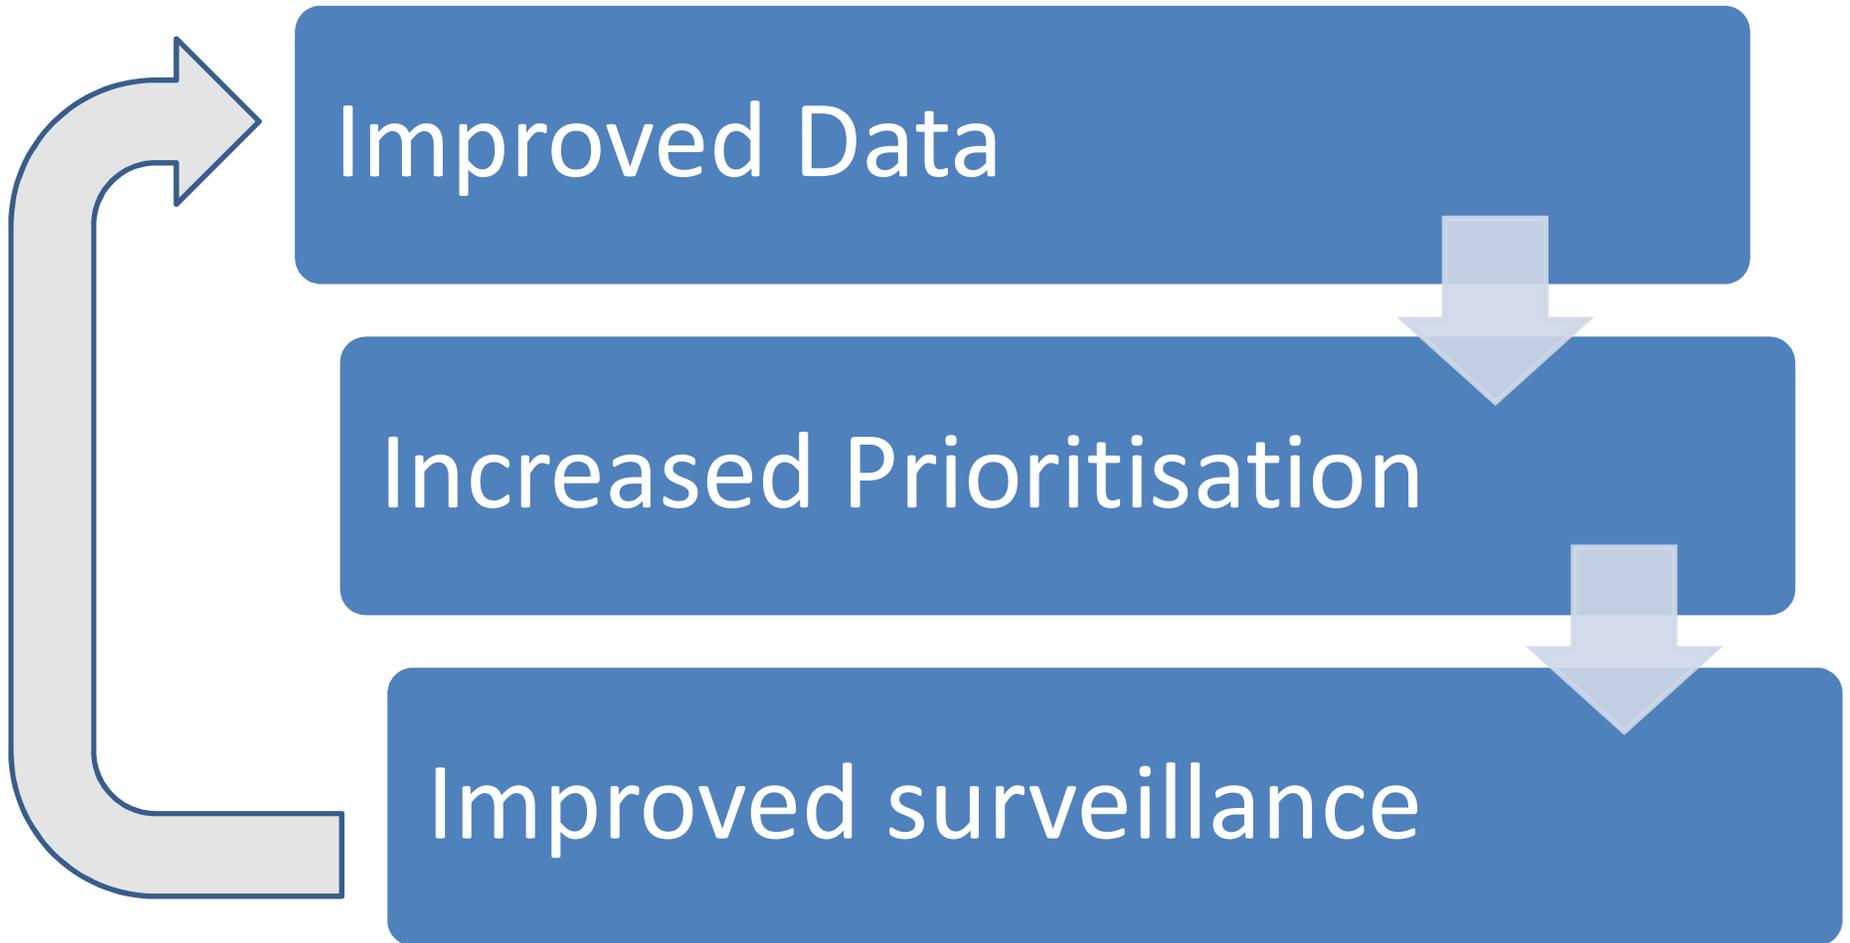

Disrupting the cycle

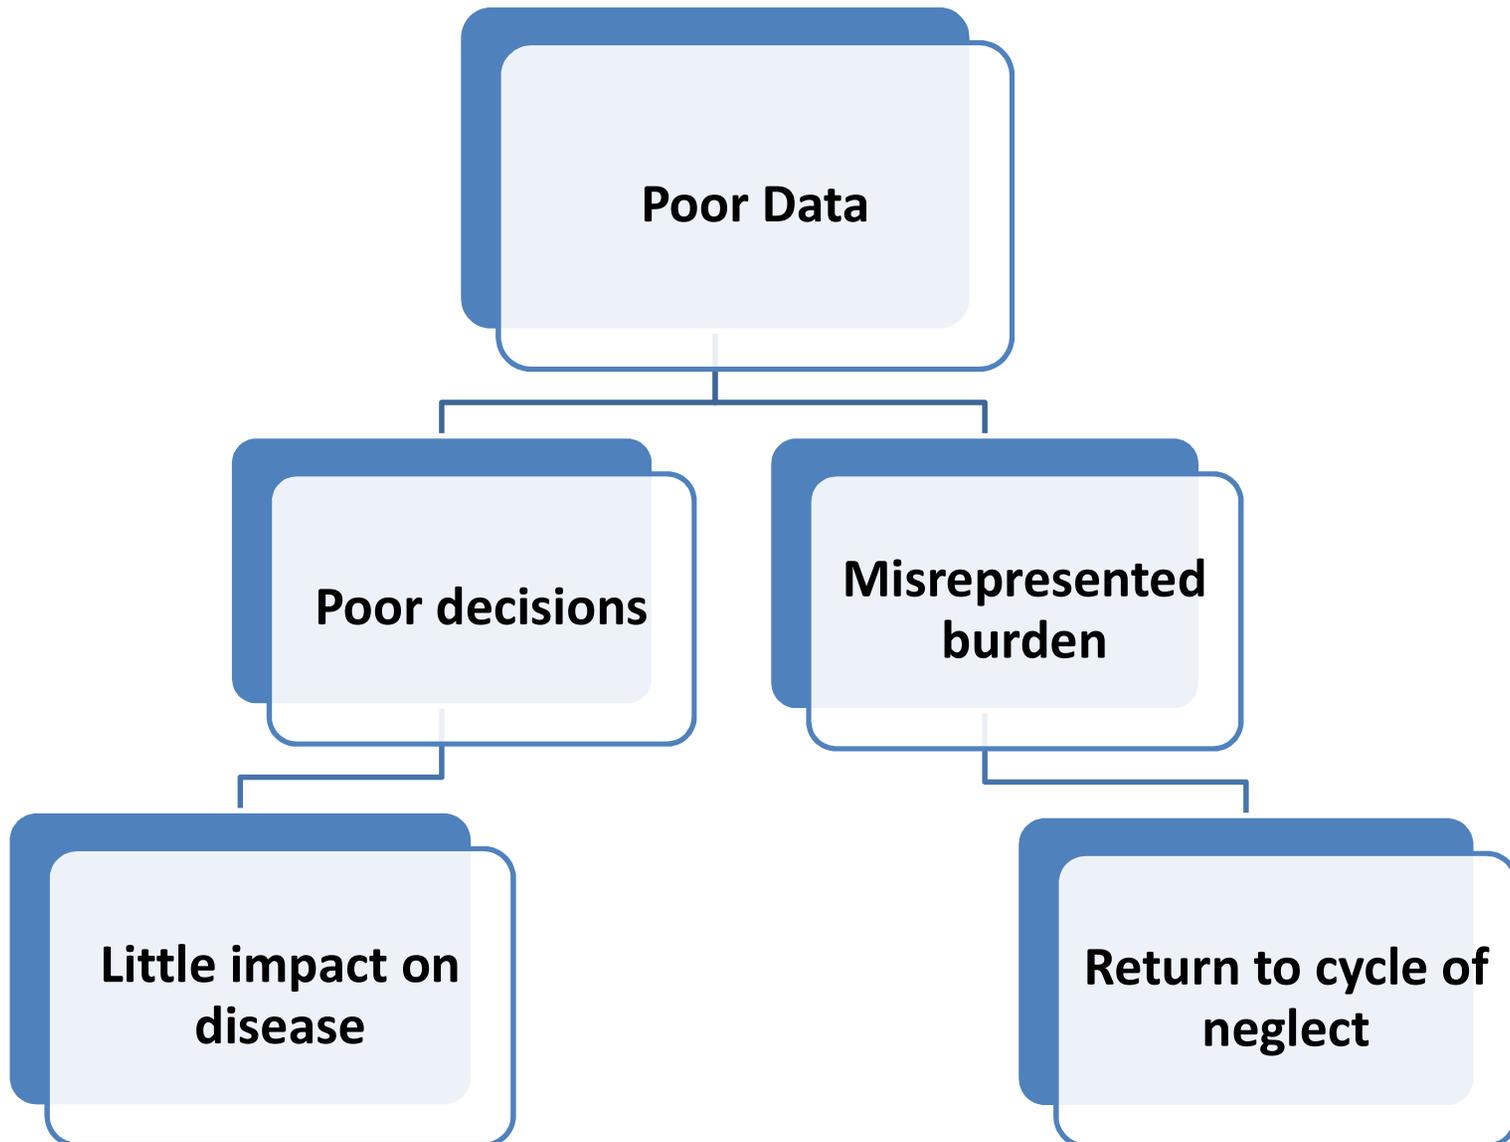

Rabies circle of neglect:
Fuelled by poor laboratory diagnosis and surveillance

How data breaks the cycle

BUT...

Good data vs Poor data

Good data

- ✓ Accurate
- ✓ Timely
- ✓ Can be analysed further
- ✓ Meaningful

Poor data

- X Partially complete
- X Late
- X Irrelevant to specific aim
- X Never analysed/processed

Obtaining data... is not always easy!

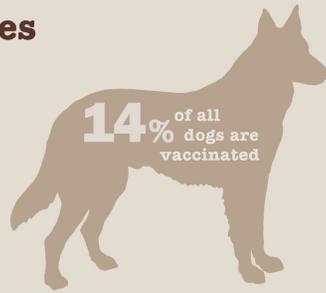

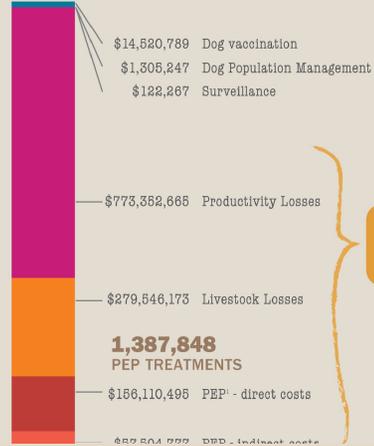

What can be done with good data?

- Determine the true burden of the disease
- Influence decisions to improve control efforts
- A platform for advocacy
 - Prioritisation
 - Funding
 - Support
 - Recognition
- Evaluate progress towards elimination

Making a statement

Africa: Annual Cost of Rabies

\$1,282,462,412 USD

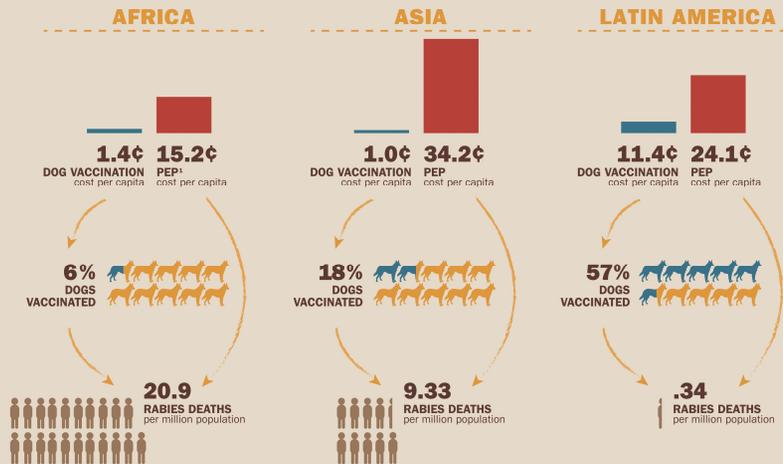

AVOIDABLE LOSSES
\$1,266,514,109 = **\$1.23** per capita

HUMAN POPULATION: **1,028,700,000**

847,326 EXPOSURES **1,345,643** DALYS¹ LOST **21,502** DEATHS

Current Spending on Rabies Vaccination

1 PEP - Post Exposure Prophylaxis is a course of vaccinations that protects a person against rabies after exposure to the virus. Costs are in US currency.

WHY WE NEED TO END RABIES NOW

Canine rabies is one of the world's oldest diseases, eliminated in countries like the US and the UK, but still a daily threat to millions around the world.

Every **09** minutes, a person dies from **RABIES.**

100% of human cases are preventable.

Domestic dogs cause over **99%** of human rabies deaths.

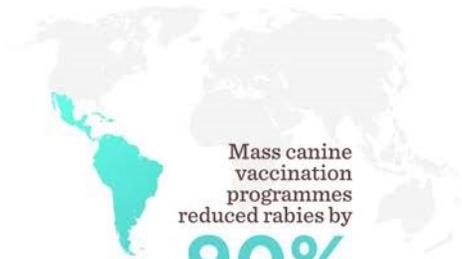

Vaccinating **70%** of dogs in at-risk areas can eliminate canine rabies.

Nearly **85%** of the world is at risk of contracting canine rabies.

95% of human rabies deaths occur in Africa and Asia.

Mass canine vaccination programmes reduced rabies by **90%** in Latin America.

Canine rabies kills more than **59,000** people every year.

2.9 million lives are saved annually due to preventative measures.
